

DISPENSING EQUIPMENT JET CLEANING UNIT

SKU: 30-0399

6.000,00 € excl. VAT

Categories: [Dispensing systems](#), [Modules](#), [smart modules](#)

BESCHREIBUNG

The Jet Cleaning Unit cleans the nozzle outlet of jet dispensers. The cleaning is realised by means of stripping movement on the fleece tape. After the cleaning process clean fleece tape is automatically fed.

Furthermore, the Jet Cleaning Unit has an integrated sensor which controls the remaining length of the tape. When the minimum length is reached, a tape change message is issued. The cleaning cassette can be completely removed to ensure easy replacement of the cleaning tape.

For position calibration of the jet dispenser, the unit is ensured by a replaceable and easy-to-clean metal plate. Dispensing dots are done in order to determine the deviation in the X and Y directions.
